

Description

Our Industry tile forms a new multi-material collection which is inspired by modern urban design trends and contemporary architectural styles. The tile collection consists of two different surface types offered in a wide variety of sizes and colours to intensify the utmost project planning flexibility. The Oxyde ceramics induce the glazed look of oxidised metallic which combine bright and dark shades. Industry tiles represent the chromatic and structural properties of a raw cement material and flaking plasters; these individualities are further exalted by the large format sizes that enhance graphic traits and permit the creation of widespread continuous surfaces without any interruption.
