

Product Guide 2022

About BluePrint Ceramics

Our Services

BluePrint Ceramics offer a range of services to our clients to assist them in the tile specification process.

CPD Seminars

BluePrint Ceramics have CPD accredited learning material available to learn at your own leisure from the comfort of your home or office. We offer seminars in video format that can be viewed at your own leisure at your own pace all in the comfort of your own home or your place of work. The CPD will be sent to you on a USB stick ready to watch along with the CPD Learning Pack. Once you have watched the CPD in full you will be able to request your Certificate.

Sample Service

We offer a comprehensive tile sample service. If you see anything you like from any of our ranges, you can order a sample via our website at the click of a button. No hassle, no worry and completely free of charge. We aim to send your sample out next day delivery to ensure our clients receive a fast, seamless service.

LRV Testing

BluePrint understand the needs of our clients when planning a project, that is why we offer on-site Light Reflectance Value testing. In a matter of seconds, we can be given an LRV reading. We offer this service so that design professionals can feel confident with this easy and accurate method of colour matching designs to any our BluePrint ranges. A certificate will be presented to the client confirming the LRV reading.

PTV Testing

A PTV test is a reliable robust method that measures the slippiness of a surface. With slips and trips now the most common cause of injury in the workplace the pendulum test is the only method that is recognised by the HSE. The pendulum test allows us to calculate the slip potential of a tile and is an invaluable test that allows us to make relevant choices when it comes to choosing tiles for projects and ensures that the relevant safety standards are met.

Fabrication & Water Jet Cutting

Blueprint Ceramics offers innovative porcelain slabs and technical stone with the option of high quality water jet cutting and fabrication solutions.

Our Fabrication products include:

- Bespoke design for wall and floor tiles
- Engraving/etching within the surface of porcelain or technical stone surfaces
- Tailor made step treads and nosing's, which are DDA compliant
- Bull nosing and polishing of skirtings, which can be cut to various sizes
- Special feature pieces for pool surrounds
- Bespoke mosaics which can be mesh mounted ready for installation
- BluePrint Ceramics have a wealth of expertise and can provide technical knowledge on any commercial or residential project, you are working on.

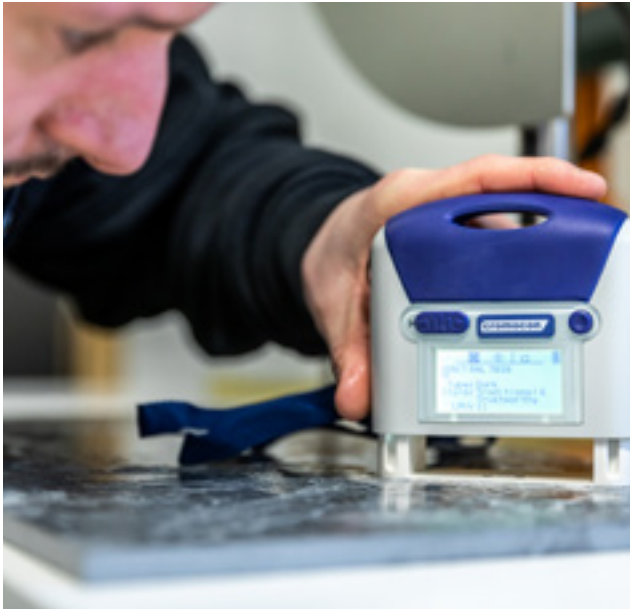

Our Services include:

- Site surveys, to assist on the substrates and fixing recommendations
- Assist with the design element of the project
- Detailed CAD Drawings
- Fabrication and installation services
- Produce full written NBS M40 specifications for submittal

BluePrint Ceramics are proud suppliers of porcelain tiles, slabs and technical stone to the fabricators which are located throughout the UK, who specialise in Vanity Units, Kitchen work tops and reception desks.

Light Reflectance Value Testing

We offer our clients LRV testing on all of our tiles to assist in the specification process.

Light reflectance testing is a measure of visible and usable light that is reflected from a surface when illuminated by a light source.

This type of testing is important to be carried out as certain surfaces need to contrast visually with their surroundings. This is particularly important in wall-to-ceiling junctions, wall-to-floor junctions and exposed edges. This type of testing is designed to help disabled members of the public including those who are visually impaired.

LRV is the total quantity of visible and useable light reflected by a surface in all directions and at all wavelengths when illuminated by a light source. LRV is a measure that tells you how much light and colour reflects and how much it absorbs.

Pendulum Testing

We offer our clients PTV testing on all of our tiles to assist in the specification process.

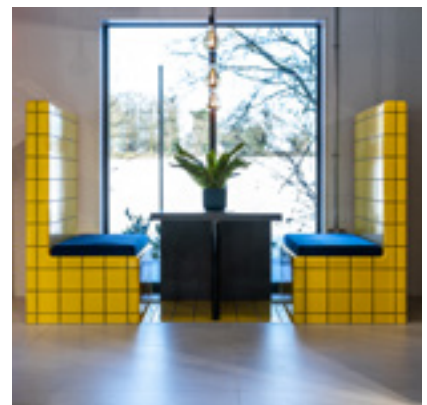

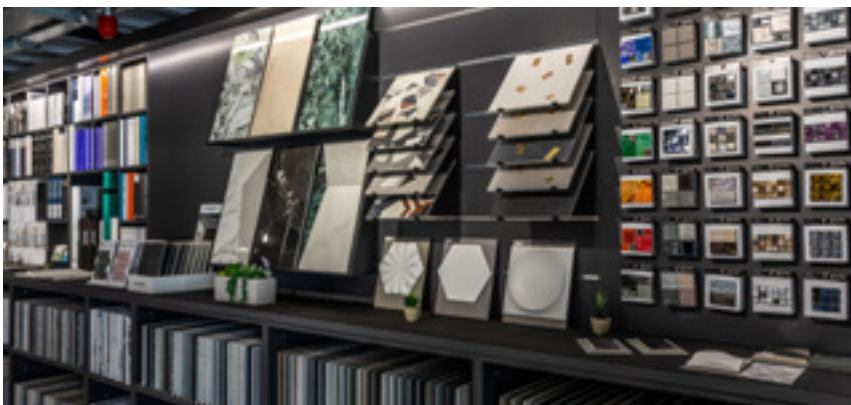

A PTV test is a reliable robust method that measures the slippiness of a floor. With slips and trips being the most common cause of injury in the workplace the pendulum test method is the only method that is recognised by the HSE.

The test is carried out using a Pendulum tester, this piece of equipment measures the slip resistance of a floor covering.

Visit our Showroom

Our eco-friendly architectural showroom is based in the heart of England . We have the most unique and innovative collections on display, with access to thousands of samples. We have modern meeting space and state of the art office space all under one roof. We can provide onsite CPD training and various types of technical testing. Explore our cutting edge showroom and book an appointment to discuss your tile specification needs with one of our consultants.

Sustainability

BluePrint Ceramics Philosophy is to bring our clients the highest quality ceramic and porcelain tiles whilst at the same time not compromising our responsibilities to the environment and the focus being on further sustainability.

To achieve sustainability is imperative for BluePrint Ceramics to source only products that make the lowest possible impact on the environment. We take into account the cost of waste and waste disposal and also the impact of emissions during the process of production.

BluePrint take time and care in sourcing products that

are produced using carefully prepared technologies and procedures that meet the requirements of a future world where we consume less, pollute less and waste less.

BluePrint Ceramics products are highly durable, the products are not susceptible to the elements such as light and temperature which means a long-lasting product.

Our products are sure to meet ecological standards that mean they are low impact on the environment, high performance for our clients and visually aesthetically pleasing.

Blueprint aim to source products that:

- Do not use harmful raw materials, glues or resins.
- Use material from quarries with strict quality controls.
- Recycle as many resources possible during the production process
- Where emissions and environmental impact have been considered.
- Where health and safety of site and workers have been considered
- Where continued improvement of processes and the impact on the environment are practised.

Measure taken in production:

100% Recycled Water

Pallet Recovery

100% Production Waste Recovery

95% Paper Recycling
